basic sciences boundary law cadastral law and administration business law computer operations and programming data adjustment economics field data acquisition and reduction finance geodesy geodetic survey calculation geographic information systems gis graphical communication mapping higher math land development principles laser scanning management measurement analysis photo image data acquisition and reduction plane survey calculation probability and statistics survey astronomy survey planning process and procedures written communication excerpt from a manual of land surveying comprising an elementary course of practice with instruments and a treatise upon the survey of public and private lands prepared for use of schools and surveyors this addition to the already numerous treatises on land surveying was caused by the demand of the surveyors of michigan for a treatise which would deal with the practical questions which meet the surveyor in his every day work in the field several admirable treatises were already in existence which dealt amply with the mathematical and instrumental part of surveying but the perplexing questions which meet the surveyor are not questions of mathematical calculation or of the use of instruments on the contrary they are for the most part questions of how to apply the principles of common law and statutory enactment to the location of boundary lines these are the controlling considerations in all resurveys a class which comprises probably nine tenths of all the land surveys which are made scarcely an allusion to these principles was to be found in any of the works on surveying extant in 1880 the michigan association of surveyors and civil engineers appointed a committee on manual to prepare a work which would give authoritative answers to the many questions of practice which came up before them the committee spent their spare time for five years in an exhaustive research of the laws and the decisions of the highest courts in the land the chairman attended the meetings of various surveyors associations and collected their reports from the great mass of material thus collected the leading points in the laws of the united states and the decisions of the courts of last resort were selected covering as nearly as possible all the points relative to surveys and boundary lines which arise in the land surveyors practice about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks com this book is a reproduction of an important historical your problem solving skills over 120 common surveying terms defined in an easy to use glossary hundreds of equations figures and tables industry standard terminology and nomenclature example problems that demonstrate how to apply the concepts presented binding paperback publisher ppi a kaplan company this historic book may have numerous typos and missing text purchasers can usually download a free scanned copy of the original book without typos from the publisher not indexed not illustrated 1894 edition excerpt exactness the moment when the observation should be made stormy weather a hazy atmosphere or the presence of clouds may interfere with or entirely prevent observation when the star is either at elongation or on the meridian and both events sometimes occur in broad daylight or at an inconvenient hour of the night under such circumstances a simple method applicable at any time polaris being visible may be acceptable and can often be used by the surveyor when other methods fail determination of the azimuth of polaris and true meridian at any hour the star being visible and the correct local mean time being known many years ago a table was published giving azimuths of polaris at stated times during one year but as it was arranged for a kind of time with which surveyors are generally unacquainted and was explained in unfamiliar astronomical terms and required the use of tables and data not always accessible it met with little favor and never came into general use in this article it is proposed to simplify the work omit all technicalities requiring a knowledge of astronomy and present the method with two new and compact tables adapted to common clock time with such plain directions for use that any person of ordinary intelligence can understand and apply them as the surveyor should have a perfectly clear idea of what is meant by astronomical time used to simplify computations and the hour angle of polaris these terms will now be explained the civil day according to the customs of society commences at midnight and comprises twenty four hours from one midnight to the next following the hours are counted from 0 to 12 from midnight to noon after which they are again reckoned from 0 to 12 from noon to midnight the u s public land survey system usplss was born in 1785 and has been evolving ever since the general land office glo and later the bureau of land management s blm system of laying out our sections townships and ranges has been refined changed modified improved and of course has benefited from improvements in equipment and advances in technology there have been

eight editions of usplss instructions published from 1785 2009 by either the glo of the blm the results are regional differences in the usplss across our united states from ohio where our system began with its initial field surveys to alaska where surveying work continues and there are differences in the usplss from state to state as legislatures have enacted statutes pertaining to the system in their state and each state s courts have interpreted the statutes or established a resurvey legal principle through case law while the broad view of the usplss is similar each state will have its own peculiarities specific to only that state textbooks and reference manuals about the usplss in general and about generic resurvey procedures on the system are available textbooks or reference manuals about the usplss which are state specific and cover the original glo instructions resurvey procedures and applicable state statutes and case law are not available until now for missouri this book is a complete synthesis of the usplss for missouri briefly it contains the early history of the system from 1785 1815 the french and spanish in pre america missouri the shaping of missouri its boundaries laying out the original glo surveys glo protraction and platting missouri court decisions relative to the usplss historical review of missouri statute law relative to the usplss 1814 to date best practices for reestablishing lost and restoring obliterated corners of the usplss example calculation problems applying coordinate geometry to lost corner reestablishment example glo plats with notes this comprehensive coverage of the usplss for missouri will provide the surveying student educator and practitioner and those preparing for licensure as a professional surveyor in missouri with a single book that will fill the reference void that existed in the past the book has seven chapters three tables twenty eight figures forty eight protraction and example problems eighty nine example glo plats four appendices and a glossary and further reading list the surveyor reference manual is the most comprehensive reference and study guide available for surveyors preparing for the fundamentals of surveying fs exam new chapters on gps electronic distance measurement geographic information systems economics job costing and ethics have been added to this edition to meet the current ncees survey exam specifications the most trusted reference for the fs exam a complete introduction to the exam including the format and content a comprehensive review of the math needed to perform surveying functions more than 240 solved example problems and 385 solved practice problems a full glossary of terms an easy to use table of sine cosine and tangent values the land surveyor reference manual successfully prepared me for the exam and is now the backbone of my reference collection j forest mckenzie ii e i t l s i t civil designer adc engineering inc
